increase in victims of cyber crime in the past two years

Protecting your business from cyber threats is more critical than ever before.

There have been approximately 2.4 million instances of cyber crime and nearly 50,000 instances of fraud resulting from those attacks in the past 12 months* in UK businesses. Those figures can make it hard to appreciate the severity of the risk you are taking if you are doing little or nothing to protect your business, your clients, and your workforce.

Without protection, you are leaving your company open to attack.

Why Cyber Essentials?

Cyber Essentials and Cyber Essentials Plus are government-backed certifications that show your commitment to protecting your business and its data.

Enhance your cyber security

Cyber Essentials helps you implement robust security measures that will defend you and your business against common cyber threats. Implementing the framework significantly reduces the risk of cyber-attacks and data breaches.

Build trust

By clearly demonstrating your commitment to cybersecurity, you reassure clients, partners, and stakeholders that their data and interactions with your business are secure. Cyber Essentials certification enhances your reputation and can open doors to new opportunities, including Government and enterprise contracts.

Mitigate risks

Cyber Essentials focuses on fundamental security practices giving you a layer of protection from the most prevalent threats. By identifying vulnerabilities, you can proactively manage and mitigate them, minimising the likelihood of successful attacks.

Cyber Essentials

Cyber Essentials is suitable for businesses of all sizes and provides a baseline level of security. It focuses on self-assessment and allows you to demonstrate your commitment to cyber security through a straightforward certification process.

Cyber Essentials Plus

Cyber Essentials Plus is an advanced cyber security certification program that goes beyond the requirements of Cyber Essentials. It includes a more rigorous assessment process conducted by independent certifying bodies. Cyber Essentials Plus provides a higher level of assurance by performing technical tests and vulnerability scans to validate the effectiveness of an organisation's security controls.

Cyber Essentials and Cyber Essentials Plus aim to enhance your cybersecurity measures, reduce risks, and demonstrate a commitment to protecting sensitive information. The choice between the two certifications depends on your security requirements, the level of assurance you need, and the resources available to qualify for the more comprehensive assessment process of Cyber Essentials Plus.

What we do

As a Cyber Essentials authorised partner, ILUX can take away the pressure of finding the right technical resource in your business to complete the often lengthy process of gaining certification.

We will complete the whole process for you from the initial audit of your current policies and procedures, testing your systems, and then completing and managing all the documentation to ensure you meet the necessary standards and are awarded your certificate.

Initial assessment

We already know your infrastructure and how your systems work. We will audit your existing cyber security policies and practices, including your network, hardware and software configuration and access controls, to identify gaps or vulnerabilities we aren't already aware of. We then compare this against the Cyber Essentials questionnaire and produce a gap analysis.

Action plan

Next, we develop a detailed plan that outlines where you have vulnerabilities with suggestions of how these can be addressed. This may include implementing or enhancing your firewalls, configuring devices more securely, strengthening access controls, deploying anti-malware solutions, or establishing a patch management process.

Implementation phase

Once we agree, we implement any recommended changes (if necessary) to your IT infrastructure and recommend training for your staff.

Internal testing

Once implemented, we will run internal security testing to validate your overall systems. This includes vulnerability assessments, penetration testing and simulated attacks to identify any remaining gaps.

Cyber Essentials assessment

We will complete the self-assessment questionnaire for you. This includes collating the necessary documentation and completing the 28-page Government issued questionnaire that reviews the scope of your organisation, your IT infrastructure, network and operating platforms, and your security and compliance configurations.

Certification awarded

As an Authorised Partner, we will obtain your Cyber Essentials Certification.

Ongoing maintenance

Cyber Essentials Certification means that you must continually monitor your compliance. We regularly review and update your security measures and monitor for emerging threats. Ready to get your business protected?

Get in touch today and you are on your way to Cyber Essentials Certification.
